

Amplitude

100ms

The figure is a red line graph plotted within a black rectangular frame. The y-axis is labeled 'Amplitude' and the x-axis represents time. A horizontal black scale bar is positioned above the baseline, with the text '100ms' centered above it. The graph shows a series of peaks of varying heights. There are four prominent, sharp peaks that reach the maximum height of the graph. These peaks are separated by intervals of time. The baseline of the graph is not flat but shows a noisy, fluctuating pattern. The overall trend of the graph is that the amplitude remains relatively low for most of the duration, with occasional sharp increases.
